## AMENDMENTS TO THE CLAIMS

The following is a complete, marked-up listing of revised claims with a status identifier in parenthesis, underlined text indicating insertions, and strike through and/or double-bracketed text indicating deletions.

## LISTING OF CLAIMS

1. (Currently Amended) A method of producing biogas by anaerobic digestion of organic matter, comprising:

drying organic matter to a dry solids content of at least 5070% by weight total solids (TS) and subsequently pelletising the same,

mixing the pelletised organic matter with a liquid to form a slurry, contacting the slurry with biogas-producing bacteria for digestion under anaerobic conditions in a reactor, and

digesting the slurry while producing biogas.

- 2. (Cancelled).
- 3. (Previously Presented) A method as claimed in claim 1, wherein the dried and pelletised matter is ground before being mixed with said liquid to form the slurry.
- 4. (Currently Amended) A method as claimed in claim 1, further comprising: grinding the <u>pelletized</u> organic matter such that at least 80% by weight of the organic matter obtains a particle size of 0.5-3 mm <u>prior to mixing the organic matter</u> with the biogas-producing bacteria.
  - 5. (Previously Presented) A method as claimed in claim 1, wherein an

additional organic matter being a different type than the organic matter is also digested in the reactor, at least 10% by weight of the total dry solids introduced into the reactor originating from the dried and pelletised organic matter.

- 6. (Previously Presented) A method as claimed in claim 1, wherein the liquid with which the organic matter is mixed is essentially pure water.
- 7. (Previously Presented) A method as claimed in claim 1, wherein the liquid with which the organic matter is mixed at least partly is digested sludge which is removed from the reactor.
- 8. (Previously Presented) A method as claimed in claim 1, wherein the pelletised organic matter is mixed in a premixing tank with a liquid to form said slurry with a dry solids content of 15-45% by weight total solids(TS), and this slurry is then introduced into the reactor to be digested at a dry solids content of 5-10% by weight total solids (TS).
- 9. (Previously Presented) A method as claimed in claim 1, wherein the dried and pelletised organic matter is dried green matter, such as dried agricultural products.
- 10. (Previously Presented) A method as claimed in claim 1, wherein the organic matter is ground before being pelletised.
  - 11-14. (Cancelled).
